## LISTING OF CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

Claims 1-41 (Canceled)

42. (Currently Amended) A machine-implemented method comprising:

receiving, at an authentication service, digital credential information associated with a first user from a relying party at an authentication service, wherein the digital credential information is indicative of a first user being professionally licensed but has been received by the relying party from an unauthorized user;

verifying that the digital credential information is valid using professional license status information that has been stored for a plurality of users;

providing verification information indicative of a valid professional license of the first user from the authentication service to the relving party; and

providing information from the authentication service to
the first user, the information indicative of receipt of valid
digital credential information from the relying party,

wherein the relying party, the unauthorized user, and the first user [[is]] are distinct from the first user each other.

- 43. (Previously Presented) The method of claim 42, wherein providing information to the first user comprises providing access to an activity log associated with the first user.
- 44. (Previously Presented) The method of claim 42, wherein:

the professional license status information comprises registration information indicative of a professional license registration status with a registration authority; and

the method further comprises, prior to providing the verification information to the relying party, verifying the registration information with the registration authority.

45. (Previously Presented) The method of claim 42, wherein:

the professional license status information comprises registration information indicative of a professional license registration status with a registration authority; and

the method further comprises verifying the registration information with the registration authority.

46. (Previously Presented) The method of claim 42, further comprising:

storing access information associated with the relying party, the access information including information indicative of the providing the verification information; and providing the access information to the relying party.

## 47. (Canceled)

- 48. (Previously Presented) The method of claim 42, further comprising providing information indicative of a failure to authenticate the digital credential information associated with the first user to a second relying party.
- 49. (Previously Presented) The method of claim 42, further comprising at least one of the relying party and the authentication service issuing a challenge in response to receiving digital credential information associated with the first user.
- 50. (Currently Amended) An article comprising a machinereadable medium embodying information indicative of instructions that when performed by one or more machines of an authentication service result in operations comprising:

receiving, at the authentication service, digital credential information associated with a first user from a relying party at the authentication service, wherein the digital credential information is indicative of a first user being professionally licensed but has been received by the relying party from an unauthorized user;

verifying that the digital credential information is valid using professional license status information that has been stored for a plurality of users;

providing verification information indicative of a valid professional license of the first user from the authentication service to the relying party; and

providing information from the authentication service to the first user, the information indicative of receipt of valid the digital credential information from the relying party,

wherein the relying party, the unauthorized user, and the first user [[is]] are distinct from the first user each other.

51. (Previously Presented) The article of claim 50, wherein providing information to the first user comprises providing access to an activity log associated with the first user. 52. (Previously Presented) The article of claim 50, wherein:

the professional license status information comprises registration information indicative of a professional license registration status with a registration authority; and

the operations further comprise, prior to providing the verification information to the relying party, verifying the registration information with the registration authority.

53. (Previously Presented) The article of claim 50, wherein:

the professional license status information comprises registration information indicative of a professional license registration status with a registration authority; and

the operations further comprise verifying the registration information with the registration authority.

54. (Previously Presented) The article of claim 50, wherein the operations further comprise:

storing access information associated with the relying party, the access information including information indicative of the providing of the verification information; and providing the access information to the relying party.

## 55. (Canceled)

56. (Previously Presented) The article of claim 50, wherein the operations further comprise providing information indicative of a failure to authenticate the digital credential information associated with the first user to a second relying party.

## 57. (Canceled)

58. (Currently Amended) A system comprising:

storage configured to store professional license status information for a plurality of users; and

an authentication service configured to:

receive digital credential information associated with

a first user from a relying party, wherein the digital

credential information is indicative of a first user being

professionally licensed;

verify the digital credential information using the professional license status information;

provide verification information indicative of a valid professional license of the first user to the relying party; and

provide information to the first user, the information indicative of receipt of valid digital credential information associated with the first user from the relying party,

wherein the authentication server is configured to provide
the information indicative of receipt of valid digital
credential information without regard to whether the relying
party has received the valid digital credential information from
the first user, and

wherein the relying party is distinct from the first user.

- 59. (Previously Presented) The system of claim 58, wherein the authentication service is configured to provide information to the first user at least by providing access to an activity log associated with the first user.
- 60. (Previously Presented) The system of claim 58, wherein the authentication information comprises registration information indicative of a registration status with a registration authority, and wherein the authentication service is further configured to:

verify the registration information with the registration authority prior to providing the verification information to the relying party.

61. (Previously Presented) The system of claim 58, wherein:

the professional license status information comprises registration information indicative of a professional license registration status with a registration authority; and

the authentication service is further configured to verify the registration information with the registration authority.

62. (Previously Presented) The system of claim 58, wherein the authentication server is further configured to:

store access information associated with the relying party, the access information including information indicative of the providing the verification information; and

provide the access information to the relying party.

- 63. (Canceled)
- 64. (Previously Presented) The system of claim 58, wherein the authentication service is further configured to provide information indicative of a failure to authenticate the digital credential information associated with the first user to a second relying party.

- 65. (Previously Presented) The system of claim 58, wherein the authentication service is further configured to issue a challenge in response to receiving digital credential information associated with the first user.
- 66. (Previously Presented) The method of claim 42, further comprising receiving, at the relying party, the valid digital credential information from an unauthorized user.
  - 67. (Canceled)
  - 68. (Canceled)
- 69. (Currently Amended) The system of claim 58, wherein the authentication server is configured to provide the information in response to receipt of in response to the relying party having received the valid digital credential information from an unauthorized user.
- 70. (Previously Presented) The system of claim 58, further comprising a relying party configured to receive the digital credential information associated with the first user and relay it to the authentication service.
